

KOVA — Investor FAQ

[COMPANY LEGAL NAME] · Confidential · [DATE]

Frequently asked questions for angels, Africa-focused VCs, accelerators, and strategic partners. Figures align with **Plan v2** pricing unless noted.

1. What is KOVA in one sentence?

KOVA is a **Business Intelligence Operating System** — six AI agents plus conversion tools (links, leads, email, WhatsApp) that run an SME's digital marketing for as little as **KES 499/month**, with **M-Pesa** billing.

2. Is the product built or still an MVP?

Built and live. Production deployment on Railway with 16 Django modules, 6 agents, 12+ Celery tasks, 9 social integrations, dual billing (M-Pesa + Stripe), partner program, and legal pages. Estimated agency-equivalent build value: **USD 159,000–245,000**. The seed round funds **growth**, not greenfield development.

3. What are you raising and on what terms?

Item	Current draft position
Amount	USD 150,000–300,000 (baseline planning at ~USD 200,000)
Stage	Seed
Instrument	[SAFE / priced equity / note — TBD with counsel]
Valuation	[PRE-MONEY VALUATION — TBD]
Option pool	[X]% post-money (typical 10–15% — counsel to confirm)

Term sheet and SHA are **Tier 2** documents — not included in this draft pack.

4. How will you use the funds?

See KOVA_Use_of_Funds.md. Summary at ~USD 200K baseline:

- **40%** — Team (2–3 hires, 12 months)
- **25%** — Marketing, GTM, Growth Partner activation
- **15%** — LLM and API costs at 1,000-user scale

- **10%** — Infrastructure, security, tooling
 - **10%** — Legal, compliance, ODPC, buffer
-

5. What is your pricing and why will SMEs pay?

Plan v2 (May 2026):

Tier	KES/mo	USD/mo
Starter	499	4
Growth	1,499	11
Pro	2,999	22
Agency	7,999	59

Value anchor: A part-time social manager costs **KES 30,000+/month**; Western tool stacks often exceed **USD 50–200/month** without AI or conversion. KOVA replaces multiple tools at African price points with local payment rails.

6. What traction do you have today?

- Production platform with verified publishing on Meta properties
- **14 TEST_BUSINESSES** — structured end-to-end pilot matrix (e-commerce, agency, food, SaaS, real estate, NGO, fintech, education)
- **Unimart Africa** — founder-operated first customer narrative
- Growth Partner Program **built** (activation capital in seed budget)
- Current infrastructure burn ~**KES 3,500–4,500/month** pre-scale

Update specific user/revenue counts in [METRICS AS OF DATE] before each investor meeting.

7. Who is the customer?

Primary ICP: Kenyan SMEs and solopreneurs who depend on social for discovery but cannot hire a marketing team.

Secondary: Creative/marketing agencies (Agency tier), NGOs (Growth), campus commerce and fintech (Growth/Pro).

Beachhead playbook: docs/FIRST_50_CUSTOMERS_PLAYBOOK.md.

8. How big is the market?

- **44M+** African MSMEs

- ~\$4.6B TAM (social + marketing SaaS for SMEs)
- **SAM:** Digitally active SMEs in Kenya/East Africa
- **18-month SOM target:** 1,000 paying users in Kenya

9. Who are competitors and why do you win?

Competitor type	Limitation	KOVA advantage
Schedulers (Buffer, etc.)	No AI loop, Western pricing	Full BIOS + M-Pesa
AI writers	No publish/engage/CRM	End-to-end execution
Agencies	High cost, not scalable	10–50× cheaper
Global suites (HubSpot, etc.)	Price + context mismatch	Built in Nairobi for Africa

Moat: Content DNA compounding, provider abstraction, founder-operator insight, partner distribution.

10. What is the technology stack and security posture?

- **Stack:** Django, Celery, PostgreSQL, Redis, HTMX, Tailwind, Railway
 - **AI:** OpenRouter LLMs with per-plan token budgets (daily + monthly caps)
 - **Media:** Cloudflare R2
 - **Auth:** OAuth social login, encrypted token storage, RBAC for teams
 - **Resilience:** 3-strike recovery, auto token refresh — see docs/PLATFORM_RESILIENCE.md
 - **Safety:** docs/CONTENT_SAFETY.md
-

11. How do you handle Meta, WhatsApp, and platform risk?

- **Provider abstraction** — one module per platform; API changes isolated
 - **9-platform diversification** — no single-platform dependency
 - **Compliance pack:** Meta app review, WhatsApp Business policies, data deletion URL live
 - **Human-in-the-loop** default for publishing and replies
-

12. How does M-Pesa work and when do you go live?

M-Pesa STK Push integration is **built**; production go-live follows Safaricom merchant onboarding (docs/MPESA_SETUP.md). Seed allocation includes M-Pesa production fees and compliance.

13. What about data protection (Kenya)?

- Live Privacy Policy, Terms, DPA template on platform

- **Data Protection Act 2019** — ODPC registration path in seed legal budget
- DPIA summary for AI + OAuth data — Tier 2
- Customer data not used to train third-party LLMs (per policy)

14. Who owns the IP?

All founder-built code, docs, and brand assets should transfer to **[COMPANY LEGAL NAME]** via **IP Assignment Deed** (02-legal/KOVA_IP_Assignment_TEMPLATE.md) — advocate execution required before close.

15. What is the cap table today?

See 03-financial/KOVA_Cap_Table_TEMPLATE.csv. Current draft assumes **[FOUNDER 1]% / [FOUNDER 2]%** with **[OPTION POOL %]** reserved. Pro forma post-money to be modeled at term sheet.

16. Is there a co-founder? How is governance handled?

- **[DESCRIBE CURRENT FOUNDER STRUCTURE]**
- **Founders Agreement** template covers equity, **4-year vesting / 1-year cliff**, roles, reserved matters, Nairobi dispute resolution
- Board structure post-seed: **[TBD — typically 3 seats: 2 founders + 1 investor observer]**

17. What are unit economics assumptions?

Metric	Planning assumption (validate in model)
Blended ARPU	KES 1,200–1,500/mo (Growth-weighted mix)
Gross margin	70–85% at scale (LLM largest COGS)
CAC (founder-led)	Low in Year 1; rises with paid GTM
Payback	<6 months target on Growth tier
Churn	[X]% monthly — measure from pilot

Full model: 03-financial/KOVA_Financial_Projections_TEMPLATE.md,
docs/KOVA_FINANCIAL_AUDIT.md.

18. What is the path to 1,000 users?

1. Complete 14-business pilot → public case studies
2. Activate 50+ Growth Partners

- 3. Hire Growth Lead post-close
- 4. WhatsApp + Facebook SME campaigns
- 5. Incubator and university partnerships

Timeline: [TARGET DATE — e.g. Q2 2027]

19. Why Kenya first?

- Founder network and M-Pesa infrastructure
- English + Swahili market testing
- Regulatory familiarity (BRS, KRA, ODPC)
- Expansion to Nigeria/SA after Kenya PMF (bridge round)

20. Are you also pursuing grants?

Yes, parallel track optional. Theory of change and impact metrics align with SDG 8/9/10. Template: 06-grants/KOVA_Grant_Impact_Narrative_TEMPLATE.md. Grant budget can overlap seed GTM — disclose double-funding risk to all funders.

21. What could kill the company?

Risk	Mitigation
Platform API shutdown	Multi-platform + abstraction + resilience
AI harm/off-brand content	Safety filters, approval flows
Slow paid conversion	Pilot proof, partner channel, pricing trials
Founder burnout	Seed hires, vesting alignment
Regulatory	Advocate-reviewed policies, ODPC registration

22. What do you need from investors beyond capital?

- Introductions to **Africa-focused angels and VCs**
- **Grant** and accelerator program intros (Mastercard Foundation ecosystem, etc.)
- **Enterprise pilot** intros (banks, telcos, MSME associations)
- Governance and **financial controls** best practices

23. How do I get more detail?

- 1. Sign **Mutual NDA** (02-legal/KOVA_Mutual_NDA_TEMPLATE.md)

2. Request data room access per KOVA_Data_Room_Index.md
3. Schedule live demo: **[DEMO URL / CALENDAR LINK]**
