Title of Invention

Artificial Intelligence-Based Business Growth Operating System

INVENTION INFORMATION

Abstract/Brief description of the invention *(Give a brief description of the invention and highlight the novel features and benefits of the invention.)*

The invention relates to an artificial intelligence-based business operating system designed to assist businesses in improving growth, customer engagement, marketing, commerce, and operational decision-making through intelligent automation.

Unlike conventional business software that performs isolated tasks, the invention provides an integrated environment capable of continuously supporting business operations using artificial intelligence, adaptive learning, and conversational interaction. The invention is designed to simplify business management while enabling organizations to make informed decisions, improve productivity, and enhance customer acquisition.

The invention is applicable across multiple industries including retail, professional services, education, healthcare, hospitality, financial services, and digital commerce.

Detailed description of the invention:

- a) What problem does the invention solve or what opportunities is it addressing? *(Don't describe the invention, but instead focus on the problem/opportunity found with existing technology, processes, or services, or a recognized problem not adequately solved by existing technologies, processes, or services.)*

Small and medium-sized businesses increasingly rely on multiple independent software systems to manage marketing, customer engagement, commerce, communication, analytics, and business operations. These fragmented systems often require significant manual coordination, technical expertise, and financial investment.

Existing business automation platforms generally focus on individual business functions rather than providing an integrated and intelligent approach to business growth and operational support. As a

result, businesses spend considerable time managing software instead of focusing on customers and growth.

The invention addresses this need by providing an intelligent software platform capable of supporting multiple business functions within a unified environment while simplifying user interaction and reducing operational complexity.

- b) Describe the invention in detail (*Consider the commercial applications of the technology and how they might be applied to a product, process, or service. Importantly, please describe what aspects of the inventions have been proven experimentally and what is shown by the data. Also, explain what materials or prototypes have been created in relation to the invention. Attach any technical documents of Invention, including (submitted or draft) manuscripts, posters, theses, and grant applications.*)

The invention consists of an artificial intelligence-powered software platform that supports business growth through intelligent automation, business analysis, customer engagement, marketing support, and commerce management.

The software enables businesses to interact with intelligent digital services through conversational interfaces while integrating multiple operational activities into a single platform.

A functional software prototype has been developed demonstrating the feasibility of the invention. Current prototype capabilities include business onboarding, AI-assisted content generation, commerce management, business workflow automation, conversational interaction, and integration with selected communication channels.

The invention is intended for commercialization as a cloud-based software platform and will continue to evolve through additional research and product development.

Supporting technical documentation, prototype screenshots, and software demonstrations are available and may be provided under appropriate confidentiality arrangements.

- c) the best way to utilize the invention as well as other variations; (*how can this invention be applied? and other technical applications*)

The invention may be deployed as:

- Cloud-based Software-as-a-Service (SaaS)
- Enterprise business management platform
- AI-assisted commerce platform
- Customer engagement platform
- Business intelligence platform
- Marketing support platform

- Digital business assistant

The invention may also be adapted for different industries and integrated with existing business systems, communication platforms, payment platforms, commerce solutions, and future artificial intelligence technologies.

- d) drawings, schematics, and/or flow diagrams as appropriate, and references to relevant publications and patents.

Supporting documentation available includes:

- System architecture overview
- Software workflow diagrams
- User interaction flows
- Functional module diagrams
- Prototype screenshots

- e) list your claims

The invention claims:

1. An artificial intelligence-based business operating system for supporting business growth and operational management.
2. A unified platform integrating multiple business functions through intelligent automation.
3. A conversational interface for business interaction and operational support.
4. An adaptive system capable of continuously improving recommendations based on business activity.
5. Methods for integrating business intelligence, marketing support, commerce management, and customer engagement within a single software environment.
6. Variations of the invention implemented through web applications, mobile applications, cloud platforms, messaging services, APIs, and future computing environments.

Keywords: *(Provide keywords that accurately describe the scope of the invention)*

Artificial Intelligence, Business Growth, Business Management, Marketing Automation, Commerce, Business Intelligence, Conversational AI, Cloud Computing, Decision Support, Software-as-a-Service

Does the invention consist of or include software?

Yes

☒

No

☐

Stage of development: Tick where appropriate

☐ idea / concept ☒ proof of concept ☒ prototype ☐ industry interest / use

Has the invention been tested experimentally? What is shown by the data? What further research will be conducted over the next 12 months to demonstrate proof of concept or further validate the invention?

A functional prototype has been developed and evaluated through software implementation and preliminary user testing. Initial results demonstrate the technical feasibility of integrating intelligent business support functions within a unified software platform. Further work over the next twelve months will focus on expanding functionality, conducting structured user evaluations, validating performance across multiple business sectors, and refining the platform for commercial deployment.

TIMELINE INFORMATION

History of the Invention

Event	Date	Place, Reference, Comment
When was it first conceived?	30/11/2026	Initial concept developed
When was it first described in writing?	5/1/2026	Research notes and design documentation
When was it first published?		
When was it first reduced to practice?		
When was it disclosed to parties that are not USIU-Africa employees? (Oral or written)		
In whose laboratory notebook(s) is the experimental data for this invention recorded? Reference numbers?		

Disclosures, Publications, and Verbal/Oral Presentations (Past or Future)

List disclosures, publications, or disseminations of any aspect of the Invention.

Description/Type	Date (or Expected Date)	Comments

Prior Art: State publications, patents, systems, or any disclosure that you are aware of that are similar to the disclosed invention.

COMMERCIAL INFORMATION

Who might be interested in your invention? Be as specific as possible. Give company and individual names.

Potential users include:

- Small and Medium Enterprises (SMEs)
- Retail businesses
- Professional service providers
- Marketing agencies
- Educational institutions
- Financial institutions
- Technology companies
- Business incubators and accelerators

Please list the companies you have contacted, those you think are active in the area, or those that want to develop a new product line. If possible, please give contact information.

Contact details:	NA
Scope of interest and/or relevance to invention:	NA

USE OF INFORMATION, MATERIALS, AND OTHERS

Was any aspect of the Invention made possible, in whole or in part, by the use of tangible materials obtained from individuals other than inventors listed above or from organizations other than the University?

Date:	NA
Materials provided:	NA
Affiliation of provider:	NA
Details of Material provided:	NA

Was a Material Transfer Agreement (MTA) signed in respect of the receipt of the materials?

NO

If yes, please provide a copy.

Are there any agreements that may affect the invention (e.g., ABS, PIC, MAT, collaborative, etc.)?

If yes, provide a list and attachments.

NO

Was any aspect of the Invention made possible, in whole or in part, by the use of Software obtained from individuals other than contributors listed above or from organizations other than the University?

Date:	NA
